

This Acceptable Use Policy applies to all members of the **Hungrid** Virtual Organisation, hereafter referred to as the VO, with reference to use of the WLCG/EGEE Grid infrastructure, hereafter referred to as the Grid. The MTA KFKI RMKI owns and gives authority to this policy.

The goal of the VO is twofold: firstly, to allow Grid users of Hungarian academic and educational institutes to perform the computing activities relevant for their research and thus function as a catch-all VO for all the Hungarian participants that do not (yet) have an established VO in their respective field of research. Secondly, it is intended to provide an EGEE testing environment for Hungarian research communities that show interest in starting their own Virtual Organizations. Members and Managers of the VO agree to be bound by the [Grid Acceptable Use Policy](#), the various security policies and other relevant Grid policies, and to use the Grid only in the furtherance of the stated goal of the VO.
